Descending from the black-and-white Dina line that has already produced a bull previously offered by K.I. SAMEN - Solution - we are currently testing a red-and-white Holstein bull. His name is Amsweer Joshua (Julandy x Lucrative x Stilist). A strongly built, nicely stretched bull with good conformation and protein scores and a pedigree that promises high longevity. In addition, Joshua has the A2A2 gene for beta casein.

Whereas Joshua's maternal line contributes great production partnered with high protein percentages, his sire Julandy adds plenty of milk with a protein score that remains constant. Julandy also vastly improves conformation and he has already sired a number of daughters with championship wins. His daughters are very nicely developed, good true types and have good udders and legs.

Joshua's protein-rich maternal line may not be the most famous cow family (certainly not within the red-and-white population), but the performances delivered by the cows in the line cannot fail to impress. The Dina line offers solid conformation, with highlights being good chest width and good body condition. What's more, this family already numbers 17 cows who have produced more than 100 tons of milk, which places them among the elite performers for this trait in the Netherlands One cow...
