The Dutch Friesian bull Bloemplaathoeve Bas 8 (Piet Adema 186 x Jacob 8 x Rivelino 279) shows throughout his pedigree high yields (high production score with the herd) and very good udders. The family also excels in fertility and longevity, which results in high lifetime productions.

Great granddam Roosje 97 (s. Marcus) produced more than 75.000kg milk and scored in all her lactations more than 7% above herd average. Granddam Roosje 116 has so far produced more than 65.000kg milk and scores on average 20% above herdmates. This very fertily granddam produces milk with very high percentages of fat and protein. The dam Roosje 145 is a further improvement in the family. She scores even higher percentages of fat and protein and scores 25% above herdmates. Like her entire family, she is very fertile and she has calved every year without any delay. Take into account this total package accompanied with a very good cell count score and the good conformation in the family it can be said that all is there for improvement fort he breed.
