

Breeder: GAEC Bernard Verjus, Saffloz, Frankrijk

- + Sire Lequel produces daughters with plenty of dairy strength with well attached udders
- + Incredible longevity in the maternal line
- + Epervier's dam is 17 years old and has produced more than 124,000 kg of milk
- + Outcross for well-known French bloodlines
- + Contributes width but also dairy strength, with breed-typical muscularity

## BULL INFORMATION

Name	Epervier	Date of birth	2009-01-29
Herdbook number	FR 3932841733	Kappa Casein	AA
A.I.-code	36980	Beta Casein	A2/A2
aAa code	516432	Cow family	
colour	RB	Straw colour	Geel
Breed	100% MON		

Epervier is the son of Lequel, known for his dairy-typical daughters. The daughters of Lequel have excellent udder balance and texture and are well attached. His daughters are average in terms of size and are predominately red in colour.

The dam of Epervier is Ignorante, who is a daughter from Grain D'Or (golden grain). She reached the ripe age of 17 years old and produced more than 124,000 kg of milk. On average she produced more than 30 kilo per day and that in the region where the famous cheese Comté comes from and where hay and not silage is used.

The expectations are that Epervier will primarily be used as an enhancer for milk production and conformation, especially when it comes to improving the udders. In addition Epervier is an outcross bull from, by far, the most well-known breeding line in the Montbéliarde breed. He comes from a region where breeding is done especially with bulls that are known for their long life without problems. In addition to depth in the frame, Epervier can also add milk type. The first calves show an above average meat yield.
