colour	EW
Breed	100% SP
Date of birth	2019-11-13
Gest. length days	
Gestation length	107
Calving ease	88
Straw colour	Purple

The first Dutch Speckle Park AI bull is now available. Floki was sired by Codiak Spencer who originates from the famous Canadian Codiak Acres stud. Codiak Spencer's progeny are highly praised in Australia. Codiak Spencer has absolutely no faults. He is heterozygous polled and does not carry the red factor.

His dam originates from the well-known Waratah Speckle Park Stud in Australia. They hold annual auctions at which their genetic material fetches extremely high prices. Waratah Spanish Angel J15 is one of the most widely used brood cows. She has outstanding breed qualities. K.I. Samen therefore acquired embryos from this fabulous combination to provide its own bull to meet the steadily growing demand for Speckle Park for use on dairy in the Netherlands.

The Speckle Park breed combines the qualities of Angus with those of the British White Park, known for its vitality. In addition, the British White Park contributes the stunning speckled markings. Use Floki with confidence for easy calving. We rank him with top marks (5 out of 5) for calving ease.
