colour	RW
Breed	100% HER
Date of birth	2019-06-09
Gest. length days	287
Gestation length	
Calving ease	
Straw colour	Yellow

Lucky van 't Zandeind (PP) is a new, homozygous polled Hereford bull. Despite his youth, the appearance of this bull is already truly imposing. He has good, sound legs with excellent locomotion and has a docile nature.

Lucky's sire, Moeskaer Keno 1222 P, was a champion Hereford at the national show in Denmark and can be described as a bull with style, an excellent frame and a lot of length. He has an outcross pedigree. His full sisters are also impressive cows who are performing well.

Lucky's maternal line also brings its own accolades: his grand dam Velner Anja P was the first Hereford cow in the Netherlands to be rated excellent - which is a unique achievement. His dam Anja P 1 van 't Zandeind is a an extremely well-fleshed cow with great type.

The addition of Lucky to K.I. SAMEN's portfolio brings a wonderful bull to its Hereford programme. He is ideal for pure breeding and for beef on dairy purposes. We expect Lucky's progeny to be calved easily, as calving ease is what the Hereford breed is renowned for.
