| aAa code | 534 | Cow family | |
| colour | RB | Straw colour | Beige |
| Breed | 100% MRY | | |

Martijn (Matthijs x Dorus x Parole), a born en bred German MRIJ bull, is a bull with good conformation and high protein in his pedigree. The mainly Dutch bulls in his pedigree are a perfect combination with the content rich German cow family.

Matthijs, sire of Martijn, is a bull with good production breeding values, in which fine fat-protein ratio and positive protein percentage is striking. Matthijs also breeds very good conformation, especially udder and feet & legs. The udders are impressive by their well attached rear udders. The feet & legs of Matthijs his daughters show a great hoof health. Matthijs can be called a true all-rounder with his excellent figures for SCS, daughter fertility and longevity.

In the maternal line of Matthijs we find cows with very good conformation; 4 generations cows with at least 83 points for total conformation and very high contents for fat and for protein. Martijn's great granddam Valencia (VG 85) has just like her dam Kalia and granddam Algeria an average protein percentage of more than 3.70%. On top of that, similar to granddam Algeria, she produced for many lactations. Granddam Algeria is the absolute top producer: she produced over 65,000 kgs of milk in 9 lactations.
