

*Alger Meekma*

- + High component percentages
- + Good udders
- + Very good fertility

## BULL INFORMATION

Name	Martijn	Date of birth	2010-08-01
Herdbook number	DE 0117215386	Kappa Casein	AB
A.I.-code	36847	Beta Casein	A1/A2
aAa code	534	Cow family	
colour	RB	Straw colour	Beige
Breed	100% MRY		

Martijn (Mattheijs x Dorus x Parole), a born en bred German MRIJ bull, is a bull with good conformation and high protein in his pedigree. The mainly Dutch bulls in his pedigree are a perfect combination with the content rich German cow family.

Mattheijs, sire of Martijn, is a bull with good production breeding values, in which fine fat-protein ratio and positive protein percentage is striking. Mattheijs also breeds very good conformation, especially udder and feet & legs. The udders are impressive by their well attached rear udders. The feet & legs of Mattheijs his daughters show a great hoof health. Mattheijs can be called a true all-rounder with his excellent figures for SCS, daughter fertility and longevity.

In the maternal line of Mattheijs we find cows with very good conformation; 4 generations cows with at least 83 points for total conformation and very high contents for fat and for protein. Martijn's great granddam Valencia (VG 85) has just like her dam Kalia and granddam Algeria an average protein percentage of more than 3.70%. On top of that, similar to granddam Algeria, she produced for many lactations. Granddam Algeria is the absolute top producer: she produced over 65,000 kgs of milk in 9 lactations.
