PRACTICAL PROVEN BREEDING

BULL INFORMATION

Name	Rowin	Date of birth	2010-04-01
Herdbook number	DE 0117215371	Kappa Casein	AA
A.I.-code	36843	Beta Casein	A2/A2
aAa code	345	Cow family	
colour	RB	Straw colour	White
Breed	100% MRY		

Rowin (Rudolf x Parole x Bello), imported from Germany, is a MRIJ bull with in Holland bred bulls and in Germany tested bulls in his pedigree (Rudolf and Parole). Both bulls belong to the top production bulls of the MRIJ breed and also stand for longevity. The maternal line of Rowin realizes very good productions and high longevity scores. We expect that Rowin's offspring will do the same!

As described above Rowin's sire Rudolf has high production traits. He is a true production bull, but scores very high figures for conformation also. His daughters have very good frames, good udders (very well high attached rear udders) and superb feet & legs. Besides this Rudolf scores very good for the secondary traits SCS, (daughter) fertility and longevity.

Longevity is also in the maternal line present in a great way. The cows from this line produced for many lactations and within these lactations they showed high productions with high protein. The three youngest generations from this line all have an average protein % of more than 3.60%. They also have good conformation (86 x 83 x 86). Dam Cantana proved to be a good breeding cow as well. The three producing daughters all got 84 points for total conformation and realized protein percentages between 3.70% and 4.00%!
