The Wilskracht Warsi family line assumes its position in the polled segment with Aspire Red PP. As the son of Augustus P Red, Aspire PP has a daughter-proven paternal line and a particularly impressive maternal line.

His mother, Wilskracht Warsi 1319, is a well developed, component-rich and highly fertile second calf cow. As a heifer, she first calved at 1.10 years, and calved again at 2.09 years, which was a month earlier after the following lactation. In this list, the protein percentage is predicted at more than 4%. Further along the line is Warsi 1112 (dam of Allianz P), the now influential brood cow and bull dam who unfortunately died too young. Another generation on, we find the famous Bram-daugter Wilskracht Warsi 879, also a brood cow and bull dam.

Aspire PP offers a complete package: an excellent proven pedigree, daughter-proven bloodline, homozygous polled and beta casein A2A2.
